DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 1. Claims 1, 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gadkaree et al. (USPN 6,225,733) in view of Bendale et al. (USPN 6,631,074).

 Gadkaree discloses an electric double layer capacitor comprises electrodes (6 and 8), which include activated carbon powder (e.g. col. 3, lines 16-17), a binder for binding the activated carbon powder (e.g. col. 8, lines 1-11), an electrolytic solution (e.g. col. 3, lines 22-24, col. 8, lines 20-31), wherein a density of the electrodes is in range of 1.4 g/cm3 to 1.8 g/cm3 (col. 3, lines 13-14). Gadkaree does not disclose a particle size distribution of the activated carbon powder as claimed. Bendale discloses an electric double layer capacitor comprises a particle size distribution of the activated carbon powder is in the range of 2 micrometers to 20 micrometers (col. 8, lines 1-3). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified to activated carbon power of Gadkaree to incorporate the particle size distribution which has the above range as disclosed by Bendale in order to provide efficiently packing density (col. 8, lines 3-4).
- 2. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Gadkaree et al in view of Bendale, and Andelman (USPN 6,127,474). Gadkaree and Bendale

Application/Control Number: 10/066,693 Page 3

Art Unit: 2836

disclose all limitations as discussed above in claim 1, but do not disclose the electrodes have the specific resistance as claimed. However, providing a capacitor with an electrode resistance of 1-10 ohm cm is well known in the art. Selecting the exact valued of the electrode resistance is based upon the design constraints imposed by the system in which the capacitor id designed to be used in. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have selected the specific resistance of electrodes of Gadkaree and Bendale to incorporate the specific resistance within 2-7 ohm cm based upon such design constraints because this is a known range of electrode resistance as taught by Andelman (col. 7, lines 21-23).

3. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Gadkaree et al in view of Bendale, and Gan et al (USPN 6,171,729). The combination of Gadkaree and Bendale disclose a binder for binding the activated carbon particles, but do not disclose the binder as claimed. Gan discloses a double layer capacitor circuit comprise a binder that contains materials such as polyvinylidene fluoride (e.g. see col. 4, lines 14-20). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified the binder Gadkaree and Bendale to incorporate the binder that contains materials such as polyvinylidene fluoride as taught by Gan in order to improve conductivity.

Allowable Subject Matter

4. Claims 6, 9-11, 14, 15, 17 are allowed.

Conclusion

Application/Control Number: 10/066,693 Page 4

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Danny Nguyen whose telephone number is (571)-272-2054. The examiner can normally be reached on Mon to Fri 8:00 AM to 4:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brian Sircus can be reached on (571)-272-2058. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
